

## Managing Information Privacy & Security in Healthcare

### CERT's Podcast Series: Security for Business Leaders

The CERT Coordination Center, a federally funded research center, is located at the Carnegie Mellon University Software Engineering Institute. CERT studies internet security vulnerabilities, researches long-term changes in networked systems, and develops information and training to help improve security.

CERT provides a growing series of podcasts [Security for Business Leaders](#) to help inform business leaders that “practicing strong information and cyber security is a nonnegotiable requirement for organizations doing business today. However, building security into an existing corporate culture is a complex undertaking. This series of podcasts provides both general principles and specific starting points for business leaders who want to launch an enterprise-wide security effort or make sure their existing security program is as good as it can be.”
