Together, nurses and nursing informatics must lead, and be visible, vocal and present at the table to achieve healthcare delivery transformation.

In order for this transformation to take place, the following actions must be addressed:

**LEADERSHIP**
- Partner with nurse executives to lead technology changes that advance health and the delivery of healthcare.
- Support the development of informatics departments and nurse informaticists in analyst, leadership and officer roles.
- Foster the evolution of nurse informaticists in leadership roles such as a Nursing Informatics Executive or Chief Nursing Informatics Officer (CNIO).

**EDUCATION**
- Transform nursing education to include informatics competencies and demonstrable behaviors at all levels of academic preparation.
- Promote the continuing education of all levels of nursing, particularly in the areas of EHRs and health IT.

**POLICY**
- Ensure that data, information, knowledge and wisdom form the basis of 21st century nursing practice by incorporating informatics competencies into practice standards in all healthcare settings.
- Facilitate the collection and analysis of interprofessional healthcare workforce data by ensuring data can be collected from existing health IT systems.

**PRACTICE**
- Enable nursing informatics leaders to be knowledgeable and engaged in current public policy initiatives.
- Government agencies must recognize that regulations and reimbursement policies that remain exclusively physician-focused will not achieve the goals of healthcare transformation in the U.S.
