SINGLE SIGN-ON INTEGRATIONS

About Us

Our Company

Our company is Canadian and was established in 1994. After over 20 years, we continue to be a leading healthcare IT solutions and services company specialized in radiology. We develop fully customizable, feature-rich imaging workflow solutions for healthcare providers, allowing them to overcome day-to-day challenges. As a company, we pride ourselves on diversity, which thoroughly enriches our environment.

Our Footprint

With over 600 installations in 22 countries, our healthcare IT solutions are trusted by imaging facilities worldwide. In addition to our US and Canada-based sales teams, we have distributors that are conveniently located in multiple regions around the world, including North America, Oceania, Latin America, Europe, Africa, and Asia.

Our Mission is Simple

We help save lives daily. That's why we strive to develop the software of choice for healthcare imaging providers who want to be leaders. Through innovative design, outstanding support and heartfelt effort, we offer the very best to our customers.

Our Commitment

Our commitment is to continue to evolve with industry demands by constantly improving and automating radiology workflow. We'll save you time and money. There's no such thing as "good enough" at RamSoft. We work smart to leverage our expertise in medical imaging software to deliver great end results to our clients.

XML

XML increases efficiency and productivity within radiology practices. It enables RamSoft to launch other XML-enabled applications. When a radiologist selects a study from the RamSoft worklist, it launches the integrated application to the corresponding study with no additional clicks.

- Launch studies in one-click
- Manage studies more efficiently
- Automatically launches application into corresponding case
- Single sign-on

WEB API/JSON/REST API

Similar to HL7, WEB API, JSON, and REST API enable you to interface with multiple systems, but without the need for a VPN.

- Easier integration to other application providers like insurance eligibility, billing, and patient notifications
- Used to exchange information between systems without need for VPN or HL7 interface

URL Integration from RIS/HIS/EHR

Whether your organization employs a cloud-based or traditional EHR, RamSoft can launch via a URL request from other EHRs like EPIC.

- An image-enabled EHR offers your clinical staff a more complete view of your patients' medical records
- RapidResults™, our zero-download viewer is launched so deployment work is limited
- Check out our Client Integration Specification for more details

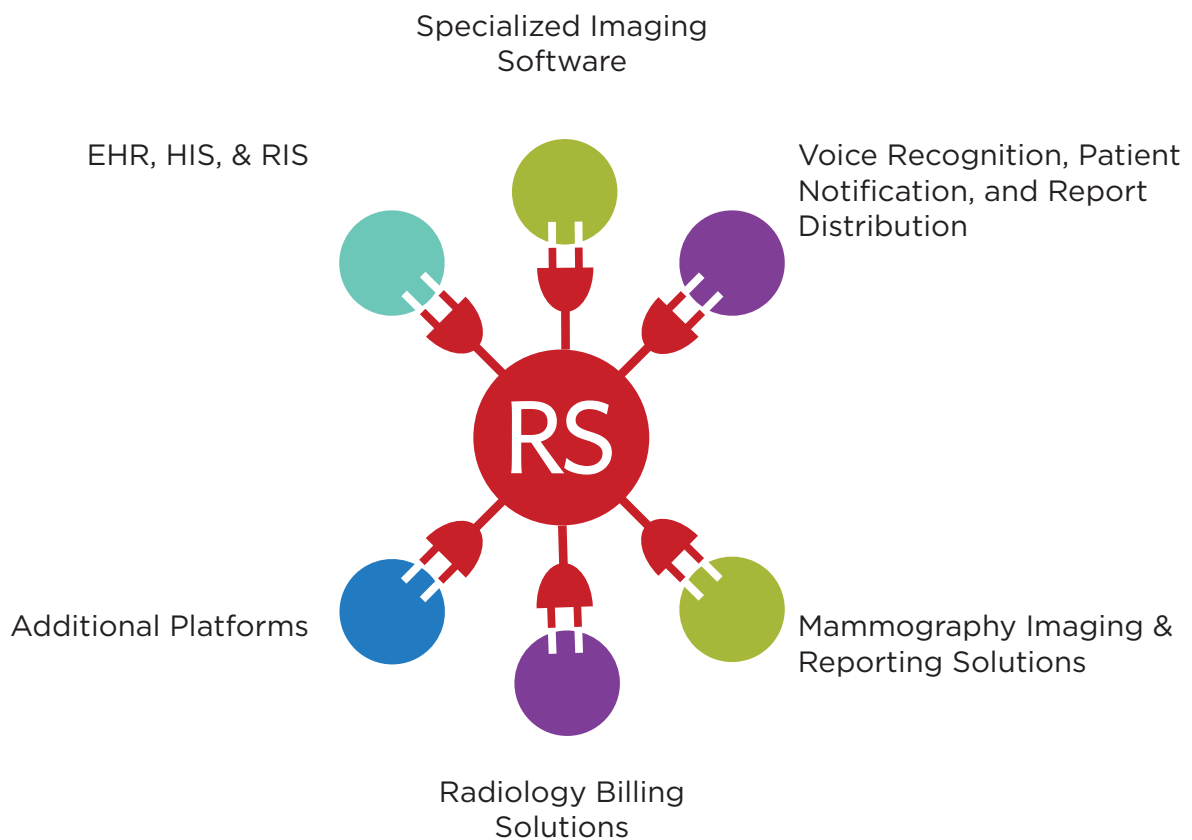

FHIR

Industry supported standard that combines HL7 and CDA to leverage the best of both technologies' latest web standards.

- An image enabled EHR offers your clinical staff a more complete view of your patients' medical records
- RapidResults™, our zero-download viewer is launched so deployment work is limited
- Check out our Client Integration Specification for more details

Partners

With over 20 years in Radiology workflow, RamSoft has done hundreds of integrations with other vendors to help improve workflow, reducing long term costs and automating the workflow beyond the RamSoft applications. Some of these integrations include, but are not limited to:
