The purpose of this project was to develop expert driven competencies in telehealth to meet the needs of various professional disciplines. Utilize the telehealth competencies to drive change across healthcare by offering robust telehealth curriculums nationally.

Background
The American Board of Telehealth (ABT) is focused on providing education and training to validate the knowledge needed to succeed in telehealth and virtual care delivery. Education programs include discipline-specific and specialty-focused telehealth content provided in online learning opportunities developed with telehealth experts from across the care continuum. The CORE Concepts in Telehealth Certificate Program launched in September 2020 and is endorsed by the American Telemedicine Association (ATA).

Results
- Over 750 learners including a variety of disciplines and specialties enrolled in the course.
- 98% of learners would recommend this course to a colleague.
- 67% of learners would make changes to practice following the course.

Implications for Practice
- Improve collaborative care with rural healthcare professionals – MD
- I can apply what I learned into my practice daily to improve patient outcomes and telemedicine protocol – RN
- Establishment of a telehealth agreement. Also discuss privileges and evaluations within my team – MD
- Plan to provide more frequent trainings and cover Best Practices with our providers more often to ensure quality, safety, continuity are adhered to – NP

Future Direction
- Targeted Curriculum:
  - TeleBehavioral Health
  - TelePrimary Care
  - Telehealth Administration
- Diversification of instructional strategies
- Collaboration with academia and healthcare associations
- Expansion of research efforts

Acknowledgement
This work was partially funded through The Leona M. & Harry B. Helmsley Charitable Trust, Avera Health & Avera eCARE.
