

IMMUNIZATION INTEGRATION PROGRAM

In collaboration with:

The **Immunization Integration Program (IIP)** – a collaborative effort between HIMSS, Chickasaw Nation Industries, Inc and ICSA Labs – takes immunization workflow mainstream, streamlining and improving the vaccine process.

The IIP allows healthcare providers to provide better patient care by managing immunizations more effectively and efficiently by:

- *Making it easier to administer appropriate vaccines*
- *Increasing knowledge and acceptance of vaccines among patients, resulting in higher immunization rates*
- *Improving vaccine safety*
- *Providing vaccination histories and information to patients more efficiently*
- *Improving workflow and reducing the burden associated with related administrative tasks*
- *Transmitting immunization data to local registries*
- *Improving vaccine tracking to help manage costs and inventory*

IMPROVED IMMUNIZATION RATES ARE LINKED TO:

Better health outcomes

Reductions in healthcare costs

Higher levels of productivity
