

transforming health through information and technology™

Calling all healthcare chief information security officers and senior cybersecurity leaders:

Show your active support for the [HIMSS North America Cybersecurity Call to Action](#), and make your voice heard in the healthcare industry!

HIMSS would like to document and highlight the work that many health care organizations are doing to implement these principles, and encourage others to join this effort. We are looking for healthcare leaders who are planning or actively supporting one or more of the principles of the cybersecurity call to action by:

Adopting a healthcare privacy and cybersecurity framework for your organization, or by supporting others to do the same, such as business partners, business associates, and others.

Being supportive of HHS to have a CISO who will help our healthcare sector improve its security posture through collaboration and information sharing.

Addressing the shortage of qualified healthcare cybersecurity professionals through proactive recruiting, employment, and retention of such individuals—and, at the same time, facilitating the professional growth and education of such individuals.

Supporting the principles set forth in the [HIMSS North America Cybersecurity Call to Action](#).
